

Udit Aggarwal

+91-8800201753, uditagg2004@gmail.com, [LinkedI](#), [Github](#), [Portfolio](#)

Summary Software Engineer specializing in Flutter, backend development (Spring Boot/ASP.NET Core), and machine learning pipelines. Proven track record of optimizing application performance and delivering scalable solutions in agile environments.				
WORK EXPERIENCE				6 MONTHS
<i>March 2026 - June 2026</i>		UXDLAB Software		Software Engineer Intern
Skills/Project	- Architected and deployed production-grade cross-platform applications using Flutter, implementing BLOC state management and RESTful API integrations for real-time data synchronicity. - Optimized mobile performance by refactoring legacy Dart codebases, reducing UI jank and memory leaks to enhance stability. - Engineered custom UI components and complex animations in Flutter within agile sprint cycles.			
<i>June 2025– September 2025</i>		Future Labs Technology		Software Engineer Intern
Skills/Projects	- Programmed sophisticated SAP ABAP reports and ALV grids to automate financial data analysis within the S/4HANA environment. - Developed custom BAPI-based interfaces for seamless data migration and integration between external systems and SAP S/4HANA core logic. - Conducted database performance tuning and SQL query optimization, significantly reducing execution time for high-volume transactions.			
EDUCATION				
B.Tech	Amity University Uttar Pradesh		Computer Science and Engineering	7.45 2026
PROJECTS/OTHERS				
Backend Development	Subscription Management Backend (Spring Boot & ASP.NET Core) - Engineered robust RESTful APIs and data persistence layers twice—first in Spring Boot (Java) with JPA/Hibernate, and then in ASP.NET Core (C#) with EF Core—using JWT/Spring Security and PostgreSQL. - Managed core business logic, payment processing, high-concurrency requests, automated billing reminders, and containerized deployment using Docker. - Executed this dual-implementation approach as a deliberate learning initiative to gain hands-on mastery and benchmark performance between two industry-leading backend ecosystems and their respective ORM tools.			2026
Mobile Development	Premio – Subscription Management Mobile App (Flutter) - Developed a cross-platform mobile app in Flutter/Dart to centralize expenses, utilizing State Management and local caching for real-time data sync. - Designed a premium UX with custom animations and glassmorphism UI, integrating secure API consumption layers for asynchronous data streams. - Integrated with the Spring Boot backend API to ensure secure and efficient exchange of subscription data and user credentials.			2026
Artificial Intelligence and Machine Learning	Muliti-Modal Rumor Analysis (PyTorch, LLM, Transformer) - Architected a Hybrid Cognitive Pipeline: Built a multi-agent "Digital Twin" to simulate rumor propagation, integrating fine-tuned RoBERTa for intensity quantification and an automated RAG pipeline (Flan-T5) to eliminate hallucinations. - Engineered the "Hysteria Lock" Algorithm: Deployed a custom threat-scoring algorithm (modified SIR model) to capture non-linear crisis escalation and model persistent crowd panic. - Optimized Performance & Accuracy: Achieved a 79.1% safety recall rate (boosting critical detection by 15%) and cut semantic evaluation latency to 0.34s via 4-bit quantization and dynamic VRAM offloading.			2025-2026
SKILLS/TOOLS				
Technical Stack	- Languages & Frameworks: Python, Java, Dart, C#, Flutter, Spring Boot, ASP.NET Core - Databases & ORM: PostgreSQL, JPA/Hibernate, EF Core, SQL Optimization			2026
AI/ML & DevOps Tools	- AI/ML/NLP: PyTorch, LLMs, Transformers, RAG, Transfer Learning, 4-bit Quantization - Tools & Security: Docker, JWT, Spring Security, RESTful APIs, Git			2026
